CONCLUSIONS

The Round table was attended by 28 participants. Participants were satisfied with the information received and assessed the event as informative and very well organized. Participants actively participated in the Round table discussion. It can be concluded that such an event should be organized more often in order to connect the real sector and universities.

Stakeholders from various fields of industry were present, such as the companies Alumina and Zeochem, the Institute of Public Health, the Administration of the City of Zvornik, the Regional Landfill in Zvornik, the Drina National Park, the Municipality of Milići and Srebrenica, the Geological Institute of the Republic of Srpska, and others. The round table was opened by professor Ljubica Vasiljević, project coordinator for the University of East Sarajevo, who emphasized the importance of this type of project for the improvement of the higher education system. After that, several short lectures with discussions were held, as planned in the agenda.

The most important objectives of the round table discussion were the following: consideration of the role of environmental personnel in the activities of public companies and industry in the field of environmental protection, the real market need for highly educated environmental personnel, and the importance of monitoring in the prevention, detection and control of pollution of water ecosystems.

The visibility of the Round table is ensured by announcements on several media:
